EXTERNAL EXAMINER

DECLARATION

We here by declare that the work entitled “**MARKETING EXECUTIVE FIELD VISIT MANAGEMENT APP (UI)**” is submitted in partial fulfilment of the requirement for the award degree in B.E.Computer Science and Engineering in University College of Engineering, BIT Campus, Anna University, Tiruchirappalli. It is the record of our own work carried out during the academic year 2025-2026 under the supervision and guidance of **Mrs.L.VANITHA** , Teaching Fellow, Department of Computer Science and Engineering, University College of Engineering, BIT Campus, Anna University, Tiruchirappalli. The extent and source of information are derived from the existing literature and have been indicated through the dissertation at the appropriate place.

VASANTH S

ACKNOWLEDGEMENT

I would like to thank our honorable Dean **Dr.T.SENTHILKUMAR, Professor**, Department of Mechanical Engineering for having provided us with all the required facilities to complete my project without any hurdles.

I would also like to express our sincere thanks to **Dr. G. ANNAPOORANI**, Assistant professor(Sl.Gr)**Head of the Department, Department Computer Science and Engineering**, for her valuable guidance, suggestions and constant encouragement paved the way for the successful completion of this project work.

I would like to thank our Project Coordinators, **Mrs.S.CHITRADEVI, Assistant Professor**, Department of Computer Science and Engineering, for her kind support.

I would like to thank and express our deep sense of gratitude to my project guide **Mrs.L.VANITHA, Guest Faculty**, Department of Computer Science and Engineering, for her valuable guidance throughout the project. I also extend my thanks to all other teaching staff for their encouragement and support.

I would like to thank and express my deep sense of gratitude to my intern guide **Mr.S.PRASANTH, my company mentors at NU-MED LABS**, for their valuable guidance throughout the project. Their mentorship played a key role in shaping the success of the project.

Finally, I am profoundly grateful to my beloved parents and friends for their full support and constant motivation throughout my academic journey in the moral development of this project.

ABSTRACT

The **VisitMax** application is a mobile-based solution designed with a strong emphasis on **user interface (UI) and user experience (UX)** to simplify and enhance the workflow of marketing executives in the healthcare domain. The primary focus of this project is to create an intuitive, visually engaging, and highly usable interface that allows field professionals to efficiently manage their daily visit activities.

The design process prioritizes user-centered principles, ensuring that executives who frequently visit clinics, hospitals, and healthcare partners can easily log their activities with minimal effort. Through structured UI components such as streamlined forms, clear navigation flows, and visually guided interactions, the application reduces complexity compared to traditional methods like handwritten notes and spreadsheets, which often lead to inefficiencies and inconsistent data handling.

The UI design includes key screens such as splash screen, login/signup, dashboard, visit logging interface, image capture module, and profile management, all crafted to deliver a seamless and responsive user experience. Special attention is given to accessibility, clarity of information, and ease of interaction, enabling users to quickly record visit details, upload proof images, and review visit history within a few taps.

While the primary focus is on UI/UX design, the application is supported by essential development components built using **React Native**, backend APIs, and a relational database. These components enable real-time data capture, storage, and retrieval, ensuring that the interface functions smoothly and reliably. Basic location tracking is integrated to support UI features that validate user activity and enhance data credibility. Key features include an intuitive interface, real-time interaction feedback, structured data entry screens, and visually organized reporting dashboards.

The design ensures that users can perform tasks quickly, reducing cognitive load and improving overall efficiency. The VisitMax application is particularly beneficial for sales representatives and marketing professionals who require a simple yet powerful interface to document their fieldwork.

CHAPTER 1

INTRODUCTION

In the modern digital era, organizations are continuously seeking efficient ways to improve their field operations, especially in marketing and sales domains. Field executives play a crucial role in interacting with clients, collecting market insights, and driving business growth. However, managing and tracking these field activities remains a significant challenge due to reliance on outdated manual systems. Traditional field visit tracking methods such as handwritten logs, spreadsheets, phone-based reporting, and messaging applications lack accuracy, reliability, and real-time visibility. These methods often result in delayed reporting, data inconsistencies, and lack of transparency between employees and management.

1.1 Project Overview

To address these issues, the **VisitMax Marketing Application** is proposed as digital solution. VisitMax is a mobile-based application designed to automate and streamline the entire field visit management process. The system enables field executives to record their visits, capture customer interaction details, and automatically log location data using GPS technology. The application provides a centralized platform where all visit-related information is securely stored and easily accessible.. The system is built using modern technologies such as mobile frameworks (React native/Android), backend services (Node.js), and cloud databases (MongoDB/MySQL).

1.2 Objectives of the Project

The primary objective of the **VisitMax** is to design and develop a **user-friendly, intuitive, and visually engaging mobile interface** that enables marketing executives to manage their field activities efficiently with minimal effort.

UI Objectives

- **Design a simple and intuitive interface:** Create clean layouts with clear navigation so users can easily understand and use the application without confusion.
- **Enable quick data entry through UI:** Develop structured forms and input fields that allow users to record visit details quickly with fewer steps.

- **Improve usability and accessibility:** Ensure all UI elements such as buttons, text fields, and icons are easy to access, readable, and user-friendly.
- **Provide clear visual feedback:** Use UI indicators, messages, and confirmations to guide users during actions like login, data submission, and image upload.
- **Create an engaging dashboard experience:** Design visually appealing dashboards using cards, icons, and charts to present information clearly and effectively.
- **Ensure smooth navigation flow:** Maintain consistent navigation patterns across all screens for a seamless user experience.

Supporting Application Objectives

- Implement basic functionalities to support UI interactions
- Enable image upload and location capture features
- Store and retrieve data efficiently
- Provide simple report generation

1.3 Scope of the Project

The scope of the **VisitMax** mainly focuses on designing a **user-friendly and visually appealing interface** that helps executives manage their field activities. The application prioritizes smooth navigation, clear layouts, and easy interaction while supporting essential system functionalities.

1. User Authentication (UI Focus)

The login system is designed with a clean and minimal interface to ensure quick access.

- Simple login screen with clear input fields
- OTP verification with guided UI flow
- Error messages displayed clearly for better user understanding
- Smooth transition between login and signup screens

2. Visit Management (Core UI Section)

This is the main interaction area, designed for quick and effortless data entry.

- Structured form layout with labeled fields
- Easy input for doctor name, hospital, and notes
- Dropdown/select options for visit reasons
- Clear buttons for **Add** / **Edit** / **Delete** actions
- Minimal steps to complete a visit entry

3. Location Tracking (UI Integration)

Location features are integrated seamlessly into the UI without complexity.

- Automatic location capture shown in the background
- Simple indicators confirming location tracking
- No manual effort required from the user
- Clean UI feedback for successful location capture

4. Dashboard and Analytics (Visual UI)

The dashboard is designed to give a quick and clear overview of activities.

- Card-based layout for easy readability
- Summary of daily visits at a glance
- Graphs and charts for performance visualization
- Easy navigation to other sections

5. Reporting System

Reports are presented in a structured and easy-to-understand format.

- Clean list view for reports
- Simple filters (daily/weekly/monthly)
- Clear export/download buttons
- Organized layout for better readability

6. User Profile Management

Profile management is designed for simplicity and security.

- Clean profile screen with user details
- Easy edit options
- Simple settings layout
- Secure logout button placement

Benefits to Stakeholders:

For Employees:

- Easy visit logging
- Reduced manual effort
- Clear task tracking

For Management:

- Real-time monitoring Improved productivity tracking
- Better decision-making

CHAPTER 2

PROBLEM ANALYSIS

Many organizations use traditional marketing websites that are static and lack proper interactivity and responsiveness. These applications often provide poor user experience and slow performance, especially across different devices. Existing systems built with outdated frontend technologies are difficult to maintain and scale. As a result, user engagement and efficiency are reduced.

2.1 Existing System

The current system used in many organizations for tracking field visits is largely manual

Common Methods Used:

- Paper-based logs and Excel sheets
- Phone call and WhatsApp based updates

Working Process:

1. Field executive visits client
2. Records details manually
3. Sends updates to manager
4. Manager compiles reports

Table 2.1.1.Existeng And Limitations

Aspect	Existing Manual Method	Limitation
Visit Recording	Phone calls / notes / spreadsheet entry	Not real-time and not standardized
Proof of Visit	Informal messages or no proof	Low trust and poor traceability
History Review	Search through files manually	Slow retrieval and inconsistent data
Reporting	Prepared manually at day end	Time-consuming and error-prone
Monitoring	Supervisor depends on verbal updates	Limited operational visibility

2.2 Limitations of Existing System

- Slow rendering and page loading
- Poor responsiveness on mobile devices
- Difficult maintenance and updates

Fig 2.2.1 Existing Authentication Page

Fig 2.2.2 Existing Dashboard

EXISTISNG WEB : <https://marketing.numedlabs.com/>

CHAPTER 3

PROPOSED SYSTEM

3.1 Proposed System

After analyzing the limitations of the existing system, it becomes clear that a digital, automated solution is necessary. The proposed system, **VisitMax**, is designed to address all the inefficiencies identified and provide a robust platform for managing field visits effectively.

The VisitMax system is a **mobile-based application integrated with a backend server and database**. It allows field executives to log visits, capture location data, and submit reports in real time.

Workflow Overview:

1. User logs into the application
2. Accesses dashboard
3. Adds visit details
4. Location is automatically captured
5. Data is stored in database
6. Reports are generated for management

3.2 Objectives of Proposed System

- To ensure real-time data capture
- To improve accuracy and reliability
- To enable location-based validation
- To provide centralized data storage
- To simplify report generation

3.3 Features of Proposed System

1. Secure Authentication

- OTP-based login system
- Role-based access control

2. Visit Management

- Add, edit, delete visits
- Capture client details

3. GPS Location Tracking

- Auto-capture latitude & longitude
- Prevent fake entries

4. Dashboard Analytics

- Daily summary
- Performance charts

5. Report Generation

- Downloadable reports
- Filter-based reports

3.4 Advantages of Proposed System

- Eliminates manual errors
- Saves time
- Improves transparency and Enhances productivity
- Provides real-time insights

CHAPTER 4

SYSTEM ARCHITECTURE

4.1 Architecture Overview

VisitMax follows a **3-tier architecture** system architecture defines how different components of the system interact with each other.

1. Presentation Layer

- Mobile UI (Frontend)

2. Application Layer

- Backend logic
- API services

3. Data Layer

- Database storage

ARCHITECTURE DIAGRAM

Fig 4.1.1 Architecture Diagram

4.2 System Requirements

Functional Requirements

- Login system
- Visit management
- Report generation

Non-Functional Requirements

- Mobile-first design
- Easy one-hand navigation
- Clear hierarchy
- Professional and trustworthy visual tone
- Scalable design system
- High readability
- Good tap targets for field use

4.3 Hardware Requirements

- Smartphone with GPS
- Minimum 4GB RAM
- Internet connectivity

4.4 Software Requirements

- **UI/UX : Figma**
- **Frontend: Vite, React, JavaScript**
- **Styling: Html/CSS**
- **Framework : MVC**

- Android :React native
- IDE: Visual Studio Code,Android studio,emulator
- Browser: Local Server
- Operating System: Windows

CHAPTER 5

USER INTERFACE DESIGN

5.1 Splash Screen

App loading interface. The animated splash screen is the **first screen** shown when the app is opened. It helps to create a good first impression and shows the app branding.

- The screen has a **dark blue background** with the **NU-MED LABS logo and name** at the top. the **VisitMax title and tagline** (“Marketing Made Easy”) are displayed.
- Animations like **fade-in and smooth appearance** are used for the logo and text. The animation lasts about **2–3 sec**, after which the app automatically moves to the next screen.

This splash screen makes the app look **professional, clean, and user-friendly** while introducing the brand to the user.

Fig 5.1.1 Splash Screen

5.2 Authentication Screens

The application provides three main authentication screens: **Login, Signup, and OTP Verification** to ensure secure and easy user access.

- The **Login screen** allows users to enter their mobile number and request an OTP by clicking the “Get OTP” button.
- The **Signup screen** is used for new user registration. It collects basic details such as full name, email address, and mobile number users can create an account using the “Sign Up”
- The **OTP Verification screen** ensures security by verifying the user’s identity. Users enter the 4-digit OTP sent to their registered mobile number. It includes options to resend the OTP and verify the code.

Fig 5.2.1 Authentication screen

5.3 Dashboard and Upload Screen

The **Dashboard screen** is the main interface of the application where users can view their activity and perform tasks.

- Users can upload a photo, select the **reason for the visit** (such as new call, issues, payments, or follow-up), and view their **current location on the map**.
- The screen also includes a bottom navigation bar for easy access to other sections like Home, History, Reports, and Settings.
- The **Upload Success screen** confirms that the visit details have been successfully submitted. It shows a **visit report uploaded, location tracked, and photos saved**.

Fig 5.3.1 Dashboard screen

5.4 History and Report Screen

Visit History is a chronological log. Each card surfaces the clinic name, visit date/time, address, call type, and a color-coded status badge (green for Completed, amber for Pending).

Reports is the analytics dashboard.

Fig 5.4.1 History and Report Screen

5.5 Profile and Edit Profile Screen

The **Profile** screen displays the user's personal and professional details in a clear and organized format. It shows the user's name, role, and employee ID along with basic information such as **phone number, email, and location**. Additional options such as **change password, notifications, and logout** are provided for easy account management.

The **Edit Profile** screen allows users to update their personal information. Users can modify details like **name, email, phone number, designation, and location**.

Fig 5.5.1 Profile and Edit Profile Screen

5.6 Settings Screen

Screen 1 • Settings is the root hub. It groups all configurable items into four sections — Account settings (edit profile, privacy), Preferences (notifications, location, dark mode with toggles), App settings (language, cache, version info), and Support links. A destructive Logout button sits at the bottom, visually separated in red.

Screen 2 • Change password is a focused task screen. Three masked input fields handle current, new, and confirm-new password. A live validation checklist below the inputs ticks off rules as they're met (8 chars, uppercase, number, special character) — giving real-time feedback before the user even taps submit.

Screen 3 • Terms & Conditions is a numbered scrollable document with five clauses — Acceptance, User Responsibilities, Service Usage, Data & Privacy, and Contact Information. The bottom always shows two sticky CTAs: a solid "I accept" and an outlined "Decline," ensuring the user makes an explicit choice before proceeding.

Screen 4 • Help Center has three layers: Quick Actions (4 shortcut tiles — Live Chat, Email, Call, FAQs), a Popular Topics list with categorised help entries, and a Contact Information block at the bottom as a fallback. It functions as a self-serve support directory.

Fig 5.6.1 Settings Screens

CHAPTER 6

TYPOGRAPHY AND COLOR PALATTE

6.1.TYPOGRAPHY

This design uses a simple, readable sans-serif style, likely suitable for mobile UI.

- Page titles: bold, medium-large
- Section titles: semibold
- Placeholder text: regular
- Bottom nav labels: small regular
- H1: 30–32 Bold H2: 24–28 Bold H3: 20–22 Semibold
- Body: 14–16 Regular
- Caption: 12–13 Regular
- Button: 16 Semibold

6.2 FIGMA COLOR STYLES

This color palette is designed with a modern, minimal, and trustworthy aesthetic, ideal for a digital product like a marketplace or service-based mobile app.

Fig 6.2.1 Figma color styles

Fig 6.2.2. Color palette

6.2.1 Primary Colors

Style Name	Color	Usage
Primary/Main	#1E1B5E	App main brand color
Primary/Dark	#1A1A4E	Headers, dark UI
Primary/Accent	#220061	Buttons, highlights
Primary/Light	#2D2A7A	Secondary emphasis

6.2.2 Secondary (Accent Colors)

Style Name	Color	Usage
Accent/Purple	#9C27B0	CTA highlights
Accent/Blue	#2196F3	Links, actions
Accent/Orange	#D4842A	Warnings / CTAs
Accent/OrangeLight	#E8852E	Secondary buttons

6.2.3 Neutral (Text & UI)

Style Name	Color	Usage
Neutral/Black	#000000	Primary text
Neutral/Dark	#080808	Headings
Neutral/Text	#333333	Body text
Neutral/SecondaryText	#555555	Subtext
Neutral/Grey	#666666	Disabled text

CHAPTER 7

COMPONENTS USED IN UI

7.1 Splash Screen Components

- Full-screen Brand Logo
- Tagline Text , Centered Layout

7.2 Authentication Components

Sign Up Card

- Input Fields: Full Name,Email ,Mobile Number
- Primary Button (Sign Up)
- Secondary Text Link (Login)

Login Card

- Mobile Input Field
- Primary Button (Get OTP)
- Secondary Link (Sign Up)

OTP Verification

- OTP Input (4-digit box)
- Timer Text (Resend countdown)

7.3. Dashboard Components

- **Welcome Header** : Greeting Text, User Name
- **Stats Cards** : Total Visits,Pending Visits
- **Upload Card** : Upload Icon,CTA text

- **Selection Chips (Filter Component)** : New Call,Issues,Payments,Follow Up
- **Map Component** : Static Map Preview,Location Pin

7.4. History Screen Components

- **Tab Switcher** All | Completed | Pending

7.5 Profile Screen Components

- **Profile Card**: Avatar,Name,Role
- **Info List** : Phone,Email,Location
- **Performance Cards** : Total Visits,Completed,Rating,Success %
- **Action List** : Change Password | Notifications | Logout

7.6. Settings Screen Components

- **Section Card Layout** : Account Settings,Preferences,App Settings,Support
- **Toggle Switch Component** ON/OFF states Used for:Notifications,Location,Dark Mode
- **Logout Button** Destructive button style

7.7. Navigation Components

Top App Bar

- Back Arrow / Close Icon
- Screen Title (Profile, Settings, Reports...)
- Optional Action Icon (Edit / Download)

Bottom Navigation Bar : Home,History,Reports,Settings

7.8.CORE REUSABLE COMPONENTS

These are the **real reusable components in your system**:

1. Button (Primary / Secondary)
2. Input Field
3. Card Container
4. Metric Card
5. List Item (with icon + arrow)
6. Toggle Switch
7. Section Header
8. Bottom Navigation
9. Top App Bar
10. Status Badge
11. Progress Bar

CHAPTER 10

CONCLUSION AND FUTURE WORK

10.1 CONCLUSION

The **VisitMax** application represents a practical and professional **UI-driven mobile solution** designed to simplify the day-to-day workflow of marketing executives. The entire experience—from secure login to successful visit submission—is carefully structured to deliver a **smooth, intuitive, and low-friction user journey** that aligns with real field usage.

The design emphasizes key UI principles such as:

- **Professional branding:** consistent colors, typography, and visual identity
- **Efficient workflow design:** minimal steps to complete tasks like adding visits
- **Clear visual hierarchy:** well-organized layouts for better readability
- **Reusable UI components:** consistent buttons, forms, and cards across screens
- **Performance-focused interactions:** fast navigation and responsive feedback

VisitMax demonstrates how a well-crafted mobile UI can significantly improve **reporting accuracy, operational speed, and user confidence** in a field-based environment.

10.2 FUTURE ENHANCEMENTS

The future scope of VisitMax focuses on enhancing the **user interface, user experience, and advanced features** to further improve usability and functionality:

- **Admin Web Dashboard:**
A visually rich dashboard interface for managers to monitor all executives in real time
- **Attendance & Route Planning UI:**
Interactive screens for marking attendance and planning daily visit routes with map-based visualization with charts and activity summaries
- **Offline Mode with Sync UI:**
User-friendly indicators for offline data capture and automatic background synchronization

- **Push Notifications:**
Clean notification UI for reminders, follow-ups, and daily targets
- **Advanced Analytics Dashboard:**
Enhanced UI with graphs, filters, and export options for better data analysis
- **Doctor Interaction History:**
Timeline-based UI to track previous visits and interactions with healthcare partners
- **Geo-Fencing Integration:**
Visual indicators to validate location boundaries and improve authenticity
- **Role-Based UI Access:**
Customized interfaces for executives, managers, and administrators with different views and permissions

A3.3 Core React Native Files

- **App.tsx** → Main UI logic and component rendering
- **index.ts** → Registers root component
- **app.json** → App configuration (name, icon, splash)
- **eas.json** → Build configuration for APK/AAB

A4.4 Assets Folder

Contains all static resources used in the application:

- App icons
- Splash screen images
- Android adaptive icons

A5.5 Configuration Files

- **package.json** → Defines dependencies and scripts
- **tsconfig.json** → TypeScript setup
- **gradle files** → Android build configuration

A6.6 Advantages of This Structure

- Supports **cross-platform development**
- Easy **Android build integration**
- Clean separation of **native and React code**
- Scalable for future features
- Compatible with **Expo EAS build system**

A3:USER MANUAL

A3. User Manual for VisitMax

1. Introduction

VisitMax is a mobile app used by marketing executives to record and manage their field visits easily. It provides a simple and user-friendly interface to log visit details, upload images, and track history.

2. How to Use

Step 1: Open the App

Launch the VisitMax application on your mobile

Step 2: Login / Signup

Enter your email/mobile and password

Tap **Login**

New users can tap **Signup**

Step 3: Dashboard

View summary of visits

Access main features

Step 4: Add Visit

Enter details (Doctor name, hospital, notes)

Tap **Save**

Step 5: Upload Image

Tap **Capture Image**

Take photo and upload as proof

Step 6: Location Capture

App automatically records your location

Step 7: View History

Check all previous visits

Filter by date if needed

Step 8: Profile

View or edit your details

Logout when needed

3. Basic Issues

- Login error → Check details
- Image not uploading → Check internet
- Location not working → Turn on GPS

5. Conclusion

VisitMax helps users quickly record and manage field visits with a simple and efficient interface.

Summary of Appendix

The appendix provides:

- Visual understanding through screenshots
- Technical reference through code snippets
- User guidance through manual

This ensures that the project is **complete, understandable, and easy to use** for designers, developers and end-users.

CHAPTER 1

INTRODUCTION

In the modern digital era, organizations are continuously seeking efficient ways to improve their field operations, especially in marketing and sales domains. Field executives play a crucial role in interacting with clients, collecting market insights, and driving business growth. However, managing and tracking these field activities remains a significant challenge due to reliance on outdated manual systems. Traditional field visit tracking methods such as handwritten logs, spreadsheets, phone-based reporting, and messaging applications lack accuracy, reliability, and real-time visibility. These methods often result in delayed reporting, data inconsistencies, and lack of transparency between employees and management.

1.1 Project Overview

To address these issues, the VisitMax Marketing Application is proposed as digital solution. VisitMax is a mobile-based application designed to automate and streamline the entire field visit management process. The system enables field executives to record their visits, capture customer interaction details, and automatically log location data using GPS technology. The application provides a centralized platform where all visit-related information is securely stored and easily accessible. The system is built using modern technologies such as mobile frameworks (React native/Android), backend services (Node.js), and cloud databases (MongoDB/MySQL).

1.2 Objectives of the Project

The primary objective of the VisitMax is to design and develop a user-friendly, intuitive, and visually engaging mobile interface that enables marketing executives to manage their field activities efficiently with minimal effort.

- Design a simple and intuitive interface: Create clean layouts with clear navigation so users can easily understand and use the application without confusion.
- Enable quick data entry through UI: Develop structured forms and input fields that allow users to record visit details quickly with fewer steps.
- Improve usability and accessibility: Ensure all UI elements such as buttons, text fields, and icons are easy to access, readable, and user-friendly.
- Provide clear visual feedback: Use UI indicators, messages, and confirmations to guide users during actions like login, data submission, and image upload.
- Create an engaging dashboard experience: Design visually appealing dashboards using cards, icons, and charts to present information clearly and effectively.
- Ensure smooth navigation flow: Maintain consistent navigation patterns across all screens for a seamless user experience.

Supporting Application Objectives

- Implement basic functionalities to support UI interactions
- Enable image upload and location capture features
- Store and retrieve data efficiently
- Provide simple report generation

1.3 Scope of the Project

The scope of the VisitMax mainly focuses on designing a user-friendly and visually appealing interface that helps executives manage their field activities. The application prioritizes smooth navigation, clear layouts, and easy interaction while supporting essential system functionalities.

1. User Authentication (UI Focus)

The login system is designed with a clean and minimal interface to ensure quick access.

- Simple login screen with clear input fields
- OTP verification with guided UI flow
- Error messages displayed clearly for better user understanding
- Smooth transition between login and signup screens

2. Visit Management (Core UI Section)

This is the main interaction area, designed for quick and effortless data entry.

- Structured form layout with labeled fields
- Easy input for doctor name, hospital, and notes
- Dropdown/select options for visit reasons
- Clear buttons for Add / Edit / Delete actions
- Minimal steps to complete a visit entry

3. Location Tracking (UI Integration)

Location features are integrated seamlessly into the UI without complexity.

- Automatic location capture shown in the background
- Simple indicators confirming location tracking
- No manual effort required from the user
- Clean UI feedback for successful location capture

4. Dashboard and Analytics (Visual UI)

The dashboard is designed to give a quick and clear overview of activities.

- Card-based layout for easy readability
- Summary of daily visits at a glance
- Graphs and charts for performance visualization
- Easy navigation to other sections

5. Reporting System

Reports are presented in a structured and easy-to-understand format.

- Clean list view for reports
- Simple filters (daily/weekly/monthly)

- Clear export/download buttons
- Organized layout for better readability

6. User Profile Management

Profile management is designed for simplicity and security.

- Clean profile screen with user details
- Easy edit options
- Simple settings layout
- Secure logout button placement

Benefits to Stakeholders:

For Employees:

- Easy visit logging
- Reduced manual effort
- Clear task tracking

For Management:

- Real-time monitoring Improved productivity tracking
- Better decision-making

CHAPTER 2

PROBLEM ANALYSIS

Many organizations use traditional marketing websites that are static and lack proper interactivity and responsiveness. These applications often provide poor user experience and slow performance, especially across different devices. Existing systems built with outdated frontend technologies are difficult to maintain and scale. As a result, user engagement and efficiency are reduced.

2.1 Existing System

The current system used in many organizations for tracking field visits is largely manual

Common Methods Used:

- Paper-based logs and Excel sheets
- Phone call and WhatsApp based updates

Working Process:

1. Field executive visits client
2. Records details manually
3. Sends updates to manager

Visit Recording Phone calls / notes / spreadsheet entry Not real-time and not standardized

Proof of Visit Informal messages or no proof Low trust and poor traceability

History Review Search through files manually Slow retrieval and inconsistent data

Reporting Prepared manually at day end Time-consuming and error-prone

Monitoring Supervisor depends on verbal updates Limited operational visibility

4. Manager compiles reports

Table 2.21

2.2 Limitations of Existing System

Slow rendering and page loading

Poor responsiveness on mobile devices

Difficult maintenance and updates

CHAPTER 3

PROPOSED SYSTEM

3.1 Proposed System

After analyzing the limitations of the existing system, it becomes clear that a digital, automated solution is necessary. The proposed system, VisitMax, is designed to address all the inefficiencies identified and provide a robust platform for managing field visits effectively.

The VisitMax system is a mobile-based application integrated with a backend server and database. It allows field executives to log visits, capture location data, and submit reports in real time.

Workflow Overview:

1. User logs into the application

2. Accesses dashboard

3. Adds visit details

4. Location is automatically captured

5. Data is stored in database

6. Reports are generated for management

- To ensure real-time data capture
- To improve accuracy and reliability
- To enable location-based validation
- To provide centralized data storage
- To simplify report generation

3.3 Features of Proposed System

1. Secure Authentication

- OTP-based login system
- Role-based access control

2. Visit Management

- Add, edit, delete visits
- Capture client details

3. GPS Location Tracking

- Auto-capture latitude & longitude
- Prevent fake entries

4. Dashboard Analytics

- Daily summary
- Performance charts

5. Report Generation

- Downloadable reports
- Filter-based reports

3.4 Advantages of Proposed System

- Eliminates manual errors
- Saves time
- Improves transparency and Enhances productivity

- Provides real-time insights

CHAPTER 4

SYSTEM ARCHITECTURE

4.1 Architecture Overview

VisitMax follows a 3-tier architecture system architecture defines how different components of the system interact with each other.

1. Presentation Layer

- Mobile UI (Frontend)

2. Application Layer

- Backend logic
- API services

3. Data Layer

- Database storage

Fig 4

4.2 System Requirements

Functional Requirements

- Login system
- Visit management
- Report generation

Non-Functional Requirements

- Mobile-first design
- Easy one-hand navigation
- Clear hierarchy
- Professional and trustworthy visual tone

- Scalable design system
- High readability
- Good tap targets for field use

4.3 Hardware Requirements

- Smartphone with GPS
- Minimum 4GB RAM
- Internet connectivity

4.4 Software Requirements

- UI/UX : Figma
- Frontend: Vite, React, JavaScript
- Styling: Html/CSS
- Framework : MVC
- Android :React native
- IDE: Visual Studio Code,Android studio,emulator
- Browser: Local Server
- Operating System: Windows

CHAPTER 5

USER INTERFACE DESIGN

5.1 Splash Screen

App loading interface.The animated splash screen is the first screen shown when the app is opened. It helps to create a good first impression and shows the app branding.

- The screen has a dark blue background with the NU-MED LABS logo and name at the top.the VisitMax title and tagline ("Marketing Made Easy") are displayed.
- Animations like fade-in and smooth appearance are used for the logo and text.The animation lasts about 2–3 sec, after which the app automatically moves to the next screen.

This splash screen makes the app look professional, clean, and user-friendly while introducing the brand to the user.

Fig 5.1.1

5.2 Authentication Screens

The application provides three main authentication screens: Login, Signup, and OTP Verification to ensure secure and easy user access.

- The Login screen allows users to enter their mobile number and request an OTP by clicking the “Get OTP” button.
- The Signup screen is used for new user registration. It collects basic details such as full name, email address, and mobile number users can create an account using the “Sign Up”
- The OTP Verification screen ensures security by verifying the user’s identity. Users enter the 4-digit OTP sent to their registered mobile number. It includes options to resend the OTP and verify the code.

Fig 5.1.2

5.3 Dashboard and Upload Screen

The Dashboard screen is the main interface of the application where users can view their activity and perform tasks.

- Users can upload a photo, select the reason for the visit (such as new call, issues, payments, or follow-up), and view their current location on the map.
- The screen also includes a bottom navigation bar for easy access to other sections like Home, History, Reports, and Settings.
- The Upload Success screen confirms that the visit details have been successfully submitted. It shows a visit report uploaded, location tracked, and photos saved.

Fig 5.1.3

5.4 History and Report Screen

Visit History is a chronological log. Each card surfaces the clinic name, visit date/time, address, call type, and a color-coded status badge (green for Completed, amber for Pending).

Reports is the analytics dashboard.

Fig 5.1.3

5.5 Profile and Edit Profile Screen

The Profile screen displays the user's personal and professional details in a clear and organized format. It shows the user's name, role, and employee ID along with basic information such as phone number, email, and location. Additional options such as change password, notifications, and logout are provided for easy account management.

The Edit Profile screen allows users to update their personal information. Users can modify details like name, email, phone number, designation, and location.

Fig 5.1.5

5.6 Settings Screen

Screen 1 · Settings is the root hub. It groups all configurable items into four sections — Account settings (edit profile, privacy), Preferences (notifications, location, dark mode with toggles), App settings (language, cache, version info), and Support links. A destructive Logout button sits at the bottom, visually separated in red.

Screen 2 · Change password is a focused task screen. Three masked input fields handle current, new, and confirm-new password. A live validation checklist below the inputs ticks off rules as they're met (8 chars, uppercase, number, special character) — giving real-time feedback before the user even taps submit.

Screen 3 · Terms & Conditions is a numbered scrollable document with five clauses — Acceptance, User Responsibilities, Service Usage, Data & Privacy, and Contact Information. The bottom always shows two sticky CTAs: a solid "I accept" and an outlined "Decline," ensuring the user makes an explicit choice before proceeding.
